FORD RANGER
1 PIECE HARD TONNEAU COVER
INSTALLATION INSTRUCTIONS

Care Instructions:
Clean Tonneau Cover with a mild detergent and water solution.
Do not use abrasive cleaners or solvents.

Place these instructions in vehicle’s glove box after installation is complete

WARNING!
When in the closed position, Tonneau Cover must be latched and tailgate must be closed! Failure to do so could result in unexpected opening of the Tonneau Cover from sudden wind gusts, driving conditions, which could cause damage to the vehicle and/or your Tonneau Cover!
DO NOT close the Tailgate when the Hard Tonneau is in the closed position, as damage may occur to the vehicle and/or your Tonneau Cover!

MAINTENANCE:
Only use cleaners, waxes, or products that are labelled safe for use on plastics. Avoid the use of any chemicals to clean your Tonneau Cover unless labelled safe for plastics. Avoid use of abrasive type cleansers as they may dull the finish.
The gas struts are self lubricating and should only be cleaned occasionally with a damp cloth. Premature seal failure will result if solvents or lubricants are used to clean struts.
Gas struts must be connected with the cylinder (wide) end to the Tonneau Cover or Warranty is Void.
The locking mechanisms and latches only require occasional lubrication with Graphite Powder.
DO NOT use any other lubricants or oils. Using alternative products will VOID Warranty.
All installation hardware and fasteners must be checked every so often for tightness.

TONNEAU COVER - IMPORTANT:
• Read instructions carefully before installation. It is strongly recommended that installation is conducted by an authorized dealer.
• This product must be installed exactly as specified in these instructions. Failure to do so may result in improper fit and/or retention.
• Do not stand/sit or rest heavy objects on Tonneau Cover.
• Humans or animals are not to be under the closed Tonneau Cover at any time.
• Securely latch Tonneau Cover before operating vehicle.
• Do not carry open volatile chemicals with Tonneau Cover installed.
• Recomend installation by 2 people.
• Fitting Instructions must be given to the end customer to understand correct removal and replacement process onto the vehicle.

PAINTING INSTRUCTIONS: (IF UNPAINTED)
• Prior to painting, clean all surfaces to be painted using clean water and a mild detergent, do not use lacquer thinner or any solvent based products. Wipe completely dry.
• Best results will be achieved by wiping the areas to be painted with a tack rag just prior to painting.
• Select a top coat and clear paint that is suitable for PC/ABS (Poly-Carbonate-Acrylonitrile-Butadiene-Styrene).
• Automotive paint systems, such as Acrylics or Two Packs, can be applied directly to the components. However, some paints may require a primer. If recommendations on paint specification are not followed, cracking of the part or degradation to the material may result. In all paint systems, aromatic hydrocarbons and alkalies are best avoided to reduce damage to the material properties.
• If using a paint system which requires baking, do not expose the product to temperatures above 70° C (155° F).
• Allow a minimum of 8 hours after baking before installation on the vehicle.

### TOOLS REQUIRED:

- Fine Point Non Permanent Marker
- Centre Punch
- Drill
- Ø3, Ø5, Ø6 & Ø7mm Drill Bits
- Torque Wrench
- Rivet Gun
- Scissors or Sharp Knife
- Spanners
- Socket Set
- Non-acetic Silicone
- Phillips Screwdriver (No 3)
- Allen Key
- Tape Measure
- Masking Tape
FORD RANGER 1 PIECE HARD TONNEAU COVER

Diagram #:1

1. **NOTE**: Two people are required to complete the installation. Remove cabin guard if fitted. Thoroughly clean and dry the installations areas. *See Dia #1.*

Diagram #:2

2. Place masking tape in sections along the entire length of the front and side rails as shown. *See Dia #2.*

**IF VEHICLE IS FITTED WITH A BEDLINER GO TO STEP 3, OTHERWISE PROCEED TO STEP 4**

Diagram #:3

3. Trim the bedliner to clear the Striker Support Bracket as per the dimensions shown for the RHS. Repeat for LHS. If necessary, remove the tub liner to make trimming easier. *See Dia #3.*
Diagram #:6

6. Orient the two (2) lower hinges as shown. Align the holes in the hinge lower with the slots in the header rail.
Secure with two (2) M6x20 hex head bolts, four (4) M6 flat washers small and two (2) M6 nyloc nuts for each hinge as shown.
Do not overtighten at this point. Allow side to side movement for adjustment once the tonneau cover is installed. See Dia #6.
7. Position the side drill template against to the side of the tub bed rail as shown, ensuring arrows are facing down and to the front of the vehicle. The drill template shape matches the bottom shape of the side of the bed rail. Align the bottom of the template with the bottom of the bed rail as shown. Attach using masking tape. Mark and centrepunch the two (2) unmarked holes in the middle and the two rearmost positions. Do not use the holes marked with an “M” and “F”. Drill all holes with Ø3 pilot drill and remove the drill template. Drill two (2) holes Ø7mm and two (2) Ø5.5mm as shown. Repeat process by reversing the template to use on the other side of the vehicle. Remove all masking tape from the side rails. Remove all burrs, sharp edges and swarf from vehicle. Apply rust inhibitor to all drilled holes. **See Dia #7.**

8. Attach the striker bracket and support bracket to the tub using M6 screws, M6 washers, M6 nylock nuts and rivets. Note the orientation of the striker bracket. Position face “B” of lock striker bracket against the side rail as shown. Centerpunch and drill Ø5.5mm the two lower holes in the support bracket and secure with two rivets. Tighten all bolts to 9Nm. **See Dia #8.**
Diagram #:9

9. Measure and cut header rail seal to a length of 1300mm. Locate the centre of the header rail seal and trial fit to the front panel, ensure seal is oriented correctly and centred to the tub. Remove approximately 50mm length from one end of liner. Orient and align centre of seal with centre of front panel and rearward edge of seal against the lower hinge as shown. Starting from one end apply firm pressure and remove liner along the length of the seal, ensuring seal runs parallel with the edge front panel. See Dia #9.

Diagram #:10

10. Fit the ball stud bracket to the side rail and secure with two (2) rivets (center pair of holes). Repeat process for the other side of the vehicle. See Dia #10.

Diagram #:11

11. Trial fit a corner piece to bed rail. Note where the double sided tape will contact bed rail. Align the front hole with the hole in the header rail.

Note: The corner piece front flange sits between the header rail and the tub front panel. Hold the part firmly and make sure the front hole is aligned. Mark and center punch the rear hole in the corner piece on the tub side. Drill the hole with 6mm drill. Repeat process for the other side of the vehicle. See Dia #11.
12. Clean surface with alcohol wipe provided where the double sided tape will contact bed rail. Peel tape liner from double sided tape on the corner piece. Place the corner piece on the tub sliding the front flange behind the header rail. Make sure the hole in the flange, header rail and tub all align. Press firmly to ensure good adhesion. Repeat for other side. See Dia #12.

13. Fit M6 screw, spring washer and flat washer. Push scrivet into the side hole. Repeat for the opposite side. See Dia #13.

**IMPORTANT:** Ensure vehicle's tailgate is opened before installing Tonneau Cover, and remains open until lock striker is fitted and locking mechanism is adjusted correctly. DO NOT close the Tailgate when the Hard Tonneau is in the closed position, as damage may occur to the vehicle and/or your Tonneau Cover!

14. Open vehicle’s tailgate and keep it open until locking mechanism has been adjusted correctly. Two people are required to carry out the fitment of the tonneau cover. Carefully fit tonneau cover to vehicle ensuring seal at the front of the tonneau cover sits correctly over the header rail seal as shown. If incorrectly placed this can direct water into the tub. Secure hinges with hinge pins as shown. See Dia #14.

**IMPORTANT:** Ensure hinge pins clip into retaining leg on lower hinges, ensuring pin is securely restrained. If misaligned, seal can be pushed forward from inside of the tub.
15. With tailgate open, close and check Tonneau Cover is central to vehicle and the sides of Tonneau Cover do not contact the vehicle bedrail. Adjust position by loosening the top hinge screws for fore and aft adjustment and hinge mount screws for side to side adjustment to re-position Tonneau Cover to fit centrally on vehicle. Before screwing tight, align each lower hinge section outwards in order to prevent side play. Tighten all hinge brackets to Torque 9Nm. See Dia #15.

!! Failure to do so voids Warranty on gas struts!!

16. Attach gas struts by clipping into place as shown. Ensure the narrow end mounts to the vehicle and the wide end mounts to the tonneau cover. See Dia #16.!! Failure to do so voids Warranty on gas struts!!

17. Fit the striker U-bolt to the striker bracket using nuts and washers as shown. See Dia #17.
18. Open Tonneau Cover and remove inspection cover by removing scrivets and rotating cover anti-clockwise. Release plastic retainer clips and unclip pullrods as shown. See Dia #18.

**IMPORTANT:** TAILGATE MUST BE OPEN TONNEAU COULD LOCK DURING ADJUSTMENT PROCESS.

19. Close Tonneau Cover and inspect locking mechanism. Ensure the latch hits the striker bracket centrally. If it **DOES NOT**, adjust the latch accordingly by loosening the screws and moving the latch left or right as shown. Tighten to **torque 5Nm**.

Adjust the height of the lock striker bracket by moving it up or down as shown. Tighten screws to **torque 10Nm**. See Dia #19.

**Note:** Tonneau Cover has 2 stage locks as a safety feature. Ensure Tonneau engages with second stage of the latch.

---

**Diagram #:18**

- **Diagram #:19**

- **Diagram #:20**

**IMPORTANT:** Ensure vehicles's tailgate is opened and remains open. Tonneau could lock during adjustment process.

---

20. Open the Tonneau Cover and engage the lock by pressing upwards on the latch. Adjust pullrods so that they clip back into the retainer clips correctly. Do this by rotating them clockwise to shorten them or anti-clockwise to lengthen them (via internal turn buckle). Clip pullrods and retainer clips back into position. Test lock by pressing the button on top of Tonneau Cover. If latch mechanism **DOES NOT** release, return to Step 3 and shorten the pullrods. If it **DOES** release, replace inspection cover. See Dia #20.

**IMPORTANT:** Ensure that the Tonneau Cover locking mechanism is functioning correctly before closing tailgate.
21. Open tonneau cover. Orient latch mount brackets as shown and attach to the rear of the tonneau inner using two (2) M6 x 20mm hex head bolt and washers. Position latch bracket so screw does up in the middle of the slot as shown. Repeat for the RHS. Do not fully tighten at this stage. **Note: Use caution when closing to ensure bracket does not contact vehicle tailgate.** See Dia #21.

22. Measure 80mm from LHS edge of the tailgate. Orient top hat latch brackets as shown at 80mm. Mark and center punch four (4) hole locations and drill holes with 5.5mm drill bit. Secure the top hat latch brackets to the tailgate using four (4) blind rivets for each bracket. Repeat for RHS. **See Dia #22.**

23. Close rear tailgate and then the tonneau cover to check that it closes correctly and the latch bracket does not contact the top hat latch bracket. If required adjust the latch bracket by loosening the screws with and adjusting fore and aft. Re-tighten and recheck. When adjustment is complete tighten M6 screws with captive washers to **Torque 9Nm.** **Note: Use caution when closing to ensure bracket does not contact vehicle tailgate.** See Dia #23.
REMOVAL OF TONNEAU COVER
TWO PEOPLE ARE REQUIRED TO CARRY OUT THE REMOVAL OF THE TONNEAU COVER.

Diagram #:1
1. Detach gas struts by inserting a small screw driver and adjusting the spring clip on the strut. See Dia #1.
   NOTE: Do Not remove the spring clip only a small amount of levering is required to detach.
   Do Not remove without using a tool, damage can occur and Void Warranty.

Diagram #:2
2. Remove hinge pins and then remove the Tonneau Cover. See Dia #2.
